

WEBD-152 - Web Programming 2

Assignment #2

Assignment Overview:

The purpose of this assignment is to grade your knowledge of the proper use of HTML syntax and semantics. As well, your ability to work with a provided design, which will define your ability to work in a production environment.

You will be responsible for transforming a PSD design into valid HTML and CSS. You will be provided with a PSD, to be used as a guide to create a site. Utilize floats and flexible dimensions to achieve the layout. Due to the use of flexible elements, dimensions do not have to be exact to the pixel, but be cognizant of the ratio of elements.

Requirements

- Use correct semantic HTML5 tags where necessary
- Proper organization of files and folders. ie. styles and images folders.
- Follow the PSD design as close as possible
- Inclusion of reset stylesheet. Normalize.css, reset.css, etc.
- Assignment must be upload through Github
- Optimize image correctly for online use.
- Match the PSD design as closely as possible and **do not** replace HTML elements with images.

Do not use frameworks to complete this assignment. Start from scratch and create your own branding. Use lessons provided in class, notes on drewminns.github.io and online resources to complete the assignment.

Due Monday February 24th, 2014 at 11:59pm

Assignment is worth 20% of your final grade.

10% deduction for each day it is late.

Submission Requirements

- Upload your assignment to your Github account in a new repository and send the email link to dminns@gmail.com with the following format in the subject line: 'Your Name Assignment #2'

Marking Guidelines

Use of semantic elements - 25pts

Use of floats for layout - 15pts

Proper use of images and text - 10pts

Organization - 10pts

Total - 60pts
